Hardware Specifications

As with all AI/ML related projects, the hardware being used will play a very large role in the results you get. For this project, I'm going to be using a 2024 MacBook Pro with the following specs:

MacBook Pro - Late 2024 (16-inch)

- Processor: M4 Max (14-Core CPU | 32-Core GPU)
- Ram: 36 GB Unified Memory
- Storage: 1TB SSD + 5TB Crucial external SSD

Lower spec devices will work, but may take longer to yield similar results.
