

The Dashboard

With your connections set up, you can build your dashboard. There are many templates on Grafana to choose from, or you can create your own. I chose to use the Proxmox Cluster [Flux] dashboard. See below:

Navigate to Home ---> Dashboards ---> Import Dashboards in the Grafana Web GUI:

The screenshot shows the Grafana 'Import dashboard' page. At the top, there is a search bar with the text 'Search or jump to...' and a keyboard shortcut 'ctrl+k'. Below the search bar, the breadcrumb navigation reads 'Home > Dashboards > Import dashboard'. The main heading is 'Import dashboard', followed by the subtitle 'Import dashboard from file or Grafana.com'. There are two primary methods for importing a dashboard:

- Upload dashboard JSON file:** This section features a dashed box with an upload icon. It instructs the user to 'Drag and drop here or click to browse' and lists 'Accepted file types: .json, .txt'.
- Find and import dashboards for common applications:** This section includes a link to grafana.com/dashboards. Below the link is a text input field containing the ID '15356' and a blue 'Load' button.

At the bottom, there is a section titled 'Import via dashboard JSON model' which contains a text area with a JSON snippet:

```
{
  "title": "Example - Repeating Dictionary variables",
  "uid": "_0HnEoN4z",
  "panels": [...],
  ...
}
```

Below the JSON model, there are two buttons: a blue 'Load' button and a grey 'Cancel' button.

Here, import the Grafana template ID, then select load, and adjust name your Dashboard, then click Import:

Options

Name

Proxmox [Flux]

Folder

Dashboards

Unique identifier (UID)

The unique identifier (UID) of a dashboard can be used for uniquely identify a dashboard between multiple Grafana installs. The UID allows having consistent URLs for accessing dashboards so changing the title of a dashboard will not break any bookmarked links to that dashboard.

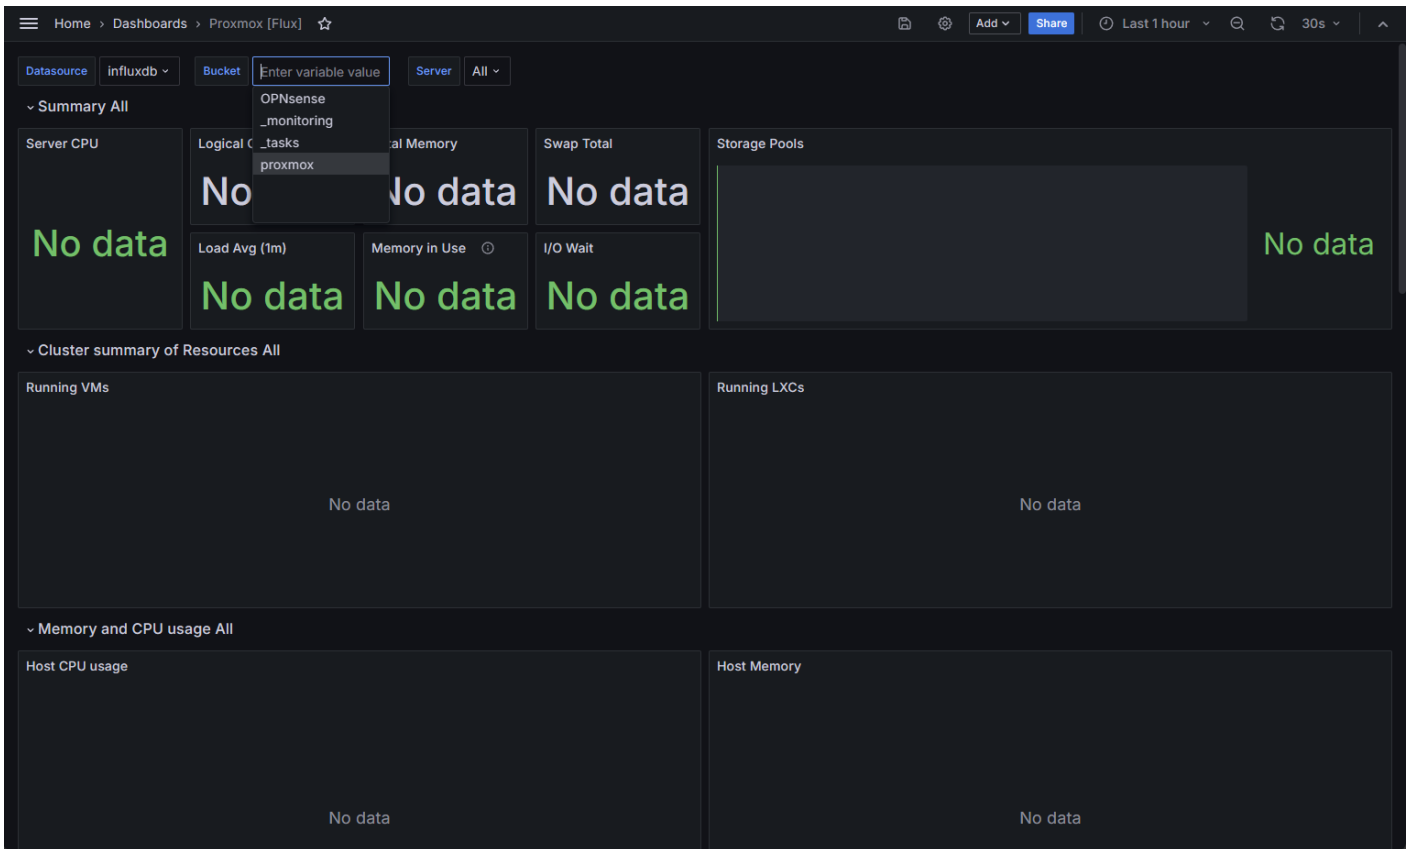

lfgdXjtnk [Change uid](#)

proxmox-flux

 influxdb

[Import](#) [Cancel](#)

Once loaded, you'll need to select your InfluxDB bucket:

The screenshot shows the Grafana interface for the 'Proxmox [Flux]' dashboard. The top navigation bar includes 'Home > Dashboards > Proxmox [Flux]'. The main content area is divided into several sections:

- Summary All:** Contains a grid of metrics including 'Server CPU', 'Logical C...tasks', 'Memory', 'Swap Total', 'Storage Pools', 'Load Avg (1m)', 'Memory in Use', and 'I/O Wait'. All these metrics display 'No data'.
- Cluster summary of Resources All:** Contains two panels: 'Running VMs' and 'Running LXCs', both displaying 'No data'.
- Memory and CPU usage All:** Contains two panels: 'Host CPU usage' and 'Host Memory', both displaying 'No data'.

The interface also features a top toolbar with 'Add' and 'Share' buttons, and a right sidebar with 'Last 1 hour' and '30s' time range selectors.

Your dashboard is all set!
