

# The Dashboard

With your connections set up, you can build your dashboard. There are many templates on Grafana to choose from, or you can create your own. I chose to use the Proxmox Cluster [Flux] dashboard. See below:

Navigate to Home ---> Dashboards ---> Import Dashboards in the Grafana Web GUI:

Home > Dashboards > Import dashboard

## Import dashboard

Import dashboard from file or Grafana.com

  
**Upload dashboard JSON file**  
Drag and drop here or click to browse  
Accepted file types: .json, .txt

Find and import dashboards for common applications at [grafana.com/dashboards](https://grafana.com/dashboards)

Import via dashboard JSON model

```
{
  "title": "Example - Repeating Dictionary variables",
  "uid": "_0HnEoN4z",
  "panels": [...],
  ...
}
```

Here, import the Grafana template ID, then select load, and adjust name your Dashboard, then click Import:

# Options

**Name**

**Folder**

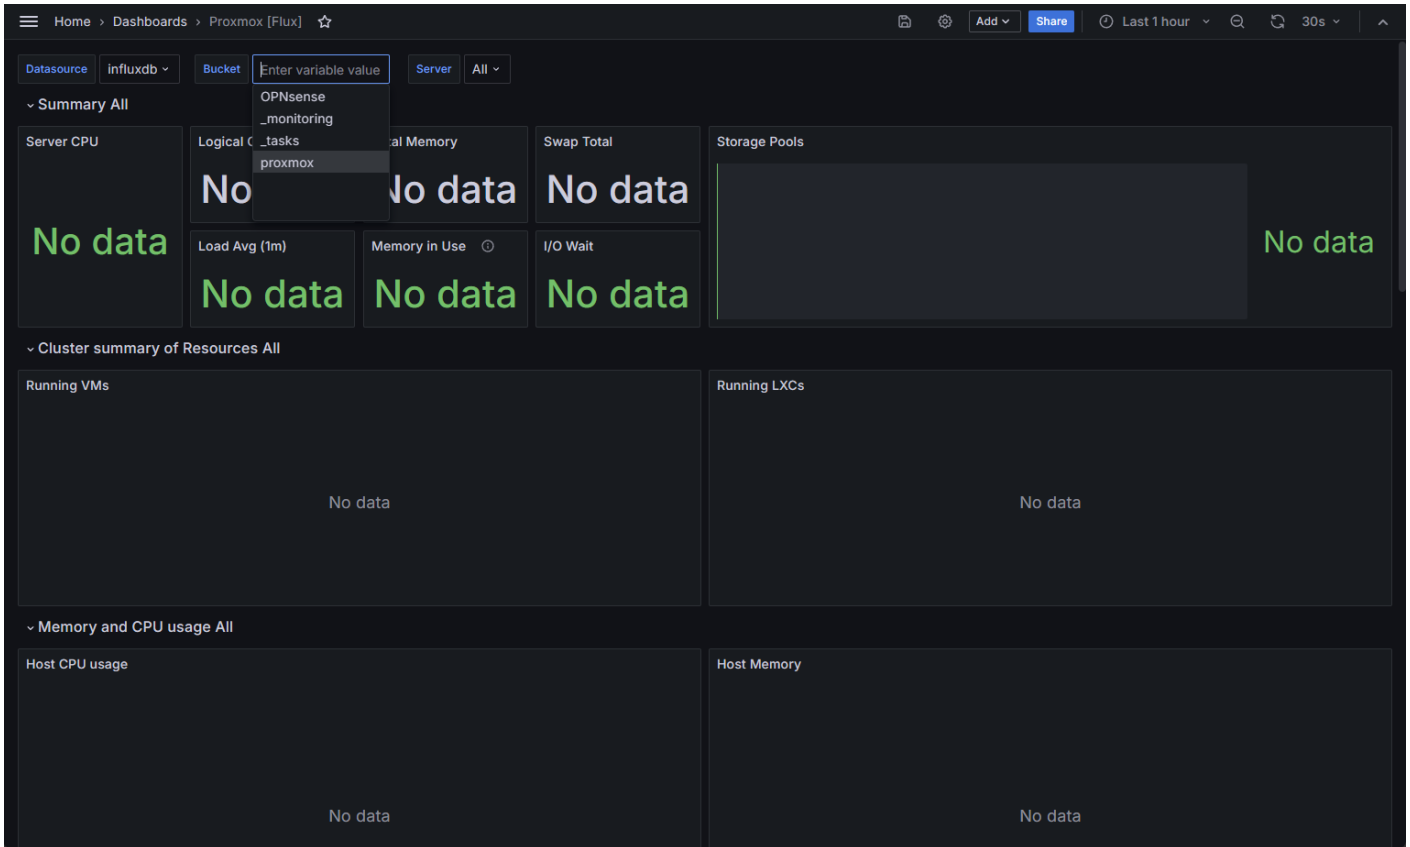

**Unique identifier (UID)**

The unique identifier (UID) of a dashboard can be used for uniquely identify a dashboard between multiple Grafana installs. The UID allows having consistent URLs for accessing dashboards so changing the title of a dashboard will not break any bookmarked links to that dashboard.

**proxmox-flux**

 influxdb

Once loaded, you'll need to select your InfluxDB bucket:

The screenshot shows the Grafana interface for the 'Proxmox [Flux]' dashboard. The top navigation bar includes 'Home > Dashboards > Proxmox [Flux]' and a star icon. The right side of the top bar has 'Add' and 'Share' buttons, and a time range of 'Last 1 hour' with a refresh button and '30s' interval. Below the navigation bar, there are tabs for 'Datasource' (influxdb), 'Bucket' (with a dropdown menu showing 'OPNsense', '\_monitoring', 'proxmox', and 'Enter variable value'), 'Server', and 'All'. The main content area is divided into several panels, all displaying 'No data':

- Summary All**
  - Server CPU: No data
  - Logical C...tasks: No data
  - Swap Total: No data
  - Storage Pools: No data
  - Load Avg (1m): No data
  - Memory in Use: No data
  - I/O Wait: No data
- Cluster summary of Resources All**
  - Running VMs: No data
  - Running LXCs: No data
- Memory and CPU usage All**
  - Host CPU usage: No data
  - Host Memory: No data

Your dashboard is all set!
